DETAILED ACTION

This Office action responds to application ser. no. 10/069,058 filed on 8/27/2002.

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- ✓ Species 1, reading on figure 4, drawn to a method of treating a semiconductor substrate comprising a particular sequence of method steps
- ✓ Species 2, reading on figure 5, drawn to a method of treating a semiconductor substrate using a particular sequence of method steps
- ✓ Species 3, reading on figure 6, drawn to a method of treating a semiconductor substrate using a particular step

2. Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

3. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

4. The claims are deemed to correspond to the species listed above in the following manner:

- ✓ Species 1, claims 1-7 and 9-13
- ✓ Species 2, claims 1-7 and 9-13
- ✓ Species 3, claims 1-3 and 8-13

The following claim(s) are generic: Claim 1 is generic to species 1-3.

5. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

- ✓ The special technical feature of species 1 is the particular sequence of method steps comprising a step of annealing the substrate under a reductive atmosphere *after* a step of performing a first sacrificial oxidation step of the substrate
- ✓ The special technical feature of species 2 is the particular sequence of method steps comprising a step of annealing the substrate under a reductive atmosphere *before* a step of performing a first sacrificial oxidation step of the substrate
- ✓ The special technical feature of species 3 is the particular method step of annealing a polished substrate under a reductive atmosphere

Thus the special technical features of the three species are not the same nor are they corresponding.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
